

# HANS PARSON

## SOFTWARE ENGINEER (BACKEND, FRONTEND & IOT)

Tanjung Duren, West Jakarta, Indonesia | +6281288467764 | [hansparson013@gmail.com](mailto:hansparson013@gmail.com)  
[linkedin.com/in/hans-parson](https://linkedin.com/in/hans-parson) | [hansparson.github.io](https://hansparson.github.io)

### PROFILE SUMMARY

Results-driven Software Engineer and IoT Specialist with an Electrical Engineering background and over 5 years of professional experience in backend development. Highly proficient in designing, building, and optimizing high-performance RESTful APIs, third-party banking integrations, and secure financial data systems complying with Bank Indonesia standards (SNAP). Adept at leveraging Golang, Python, and utilizing modern AI-assisted development workflows (Vibe Coding) to rapidly build and deploy cross-platform frontend solutions using React and Flutter.

### SKILL HIGHLIGHTS

**Core Backend & DB:** Golang, Python (Flask, FastAPI), PHP, Java, PostgreSQL, MySQL, MongoDB, Redis  
**Frontend Frameworks:** React, Flutter (Mobile & Web Cross-Platform Development)  
**AI & Productivity:** AI-Assisted Development (Vibe Coding), Cursor, GitHub Copilot, LLM Prompt Engineering  
**DevOps & Hardware:** Docker, Nginx, Git, Linux Ubuntu, Server VPS, GitLab CI/CD, IoT, Embedded Systems, RFID, Arduino

### TECHNICAL PROJECTS

#### Gostar – Full-Stack C2C Marketplace Platform

*Golang, React, Flutter,  
Docker, Nginx, DANA API*

- Engineered a scalable multi-platform marketplace application delivering native iOS and Android experiences using Flutter, integrated with a responsive web management dashboard built in React.
- Architected a high-performance backend using Golang with the Echo framework, implementing secure payment gateway processing via DANA API integrations.
- Containerized the entire infrastructure using Docker and optimized web traffic routing and load balancing using Nginx reverse proxy configurations.

#### Long-Range (LoRa) Live Device Tracker

*Arduino, Golang, React,  
WebSockets, Mesh  
Topology*

- Developed an end-to-end telemetry system utilizing hardware transceivers (Arduino) to securely transmit geolocation and status logs without active internet connections.
- Designed an infrastructure mesh topology network allowing peer-to-peer relaying of sensory data packets across distributed node terminals.
- Built a real-time web monitoring interface in React connected to a Golang backend, utilizing full-duplex WebSockets for instantaneous live tracking visual updates.

### WORK EXPERIENCE

#### Back End Developer – PT Verihubs Inteligencia Nusantara

*February 2024 – Present*

- Architect and maintain high-availability backend services utilizing Python and Golang to support core business logic.
- Lead technical integrations with diverse merchants and banking institutions to streamline automated identity and data verification processes.
- Design and optimize robust RESTful APIs, ensuring efficient data persistence and query performance across relational and non-relational databases.
- Develop secure API endpoints for AI-driven Face Recognition, automated data verification, and Anti-Money Laundering (AML) compliance checks.

## Back End Developer – PT MNC Teknologi Nusantara (MotionPay)

August 2022 – February  
2024

- Developed and maintained core e-money platform features, processing high-volume transactions including payments, top-ups, and B2B integrations using Python and Golang.
- Integrated comprehensive merchant systems and engineered secure, compliant payment APIs under Bank Indonesia standards, specifically implementing SNAP (Standar Nasional Open API).
- Managed data layer integrity across SQL and NoSQL databases, deploying containerized applications via Docker on VPS environments.
- Collaborated within a GitLab-driven CI/CD workflow for version control, code reviews, and structured software deployment cycles.

## Research and Development Engineer – PT Percepatan Anugerah Terang Global

October 2020 – August  
2022

- Engineered a 360-degree product photography hardware automation tool integrated with an Optical Character Recognition (OCR) system for seamless product data extraction.
- Developed and managed structured MySQL and PHP database backends to instantly store and catalog captured product metadata.
- Designed and programmed custom microcontroller-based RGB LED systems to automate lighting environments for professional visualization and photography.

## Research and Development Engineer – PT Favorit Teknologi Bangsa

July 2020 – September  
2020

- Designed and deployed an automated thermal screening and body temperature recognition access control system tailored for indoor capacity management during the COVID-19 pandemic.
- Built and maintained a dedicated database tracking real-time visitor logs, occupancy counts, and temperature metrics connected to a web monitoring dashboard.

## Staff Research and Development – Pusat Teknologi Informasi UKRIDA

June 2019 – November  
2019

- Designed and built an automated door access and student attendance system utilizing RFID reader technology integrated with smart student ID cards.
- Engineered a secure relational database infrastructure (MySQL) to log transaction data, track student logs, and manage access authorizations.
- Served as an Assistant Lecturer providing technical guidance and mentoring for Microcontrollers, Electrical Circuits, and Programmable Logic Controllers (PLC) courses.
- Programmed and constructed custom competition-grade robotics and environmental monitoring architectures, including Industrial Robots, KRI platforms, and telemetry weather stations.

## EDUCATION

### Bachelor of Engineering in Electrical Engineering

Universitas Kristen Krida Wacana (UKRIDA)

Graduated: November  
2019

## CERTIFICATIONS & ACHIEVEMENTS

- **Scalable Web Services With Golang** – Hacktiv8 (2022)
- **Software Copyright (Hak Cipta)** – Registered at Directorate General of Intellectual Property (DJKI) for "Permodam" Application
- **Basic Web Development Course** – Pre-Employment Program
- **Contestant** – KRI (Kontes Robot Indonesia) (2019)
- **Finalist** – Digital Lounge Hackathon Festival, Telkomsel (Drone 4G Telemetry Project) (2020)
- **Certification** – PLC Maranatha (2018)
